

ADJUSTABLE SUPPORT KIT FOR RUBBER FOOT

Ref. 8109902550

Kit made with various components that facilitates the manufacture of customised supports, with a modular assembly system using FIXTRUT 41x41 profiles for air conditioning, machinery, pipes, walkways, etc., on flat roofs.

The kit consists of an **ADJUSTABLE SUPPORT** made of 41x41 profile, 250 mm long, with an M-20 threaded nut at its upper end, onto which a 250 mm long M-20 sliding rod is screwed, allowing height adjustment from 250 mm to 500 mm.

This rod has a flat support at the top to hold the FIXTRUT 41x41 profile for the construction of the structure.

It has a support (**END JOINT**), included in the kit, for the correct fixing of the FIXTRUT profiles in the corners of the structure.

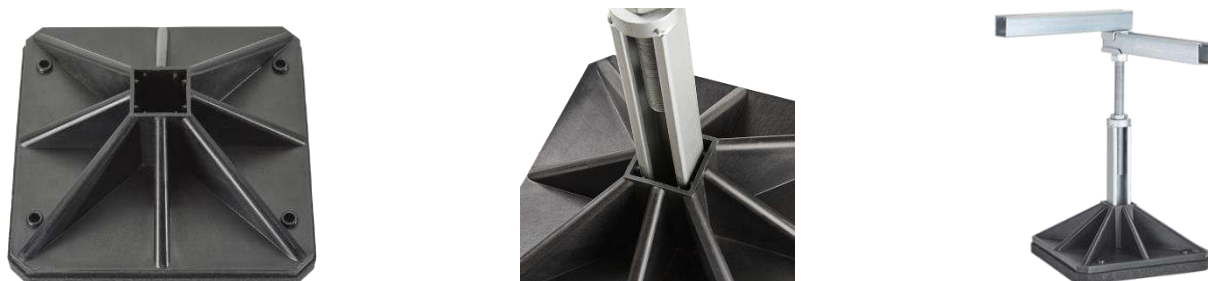

It also has a support (**CENTRAL JOINT**), included in the kit, especially for mounting the crossbars that make up the structure.

This adjustable kit has a 'Dacromet' surface treatment, which guarantees high corrosion resistance.

To fix the adjustable support, you will need our **PYRAMIDAL SUPPORT Ref. 8109930500**, **not included in the kit**, fitting the profile of the adjustable support into the pyramidal support by pressure.

For example, the maximum recommended weight for a kit assembly with 4 supports and accessories is 400 kg. It is recommended to always use a 41x41 FIXTRUT profile with a thickness of 2.5 mm.

Advantages: It simplifies the manufacture of a structure for one or more condensers, allowing, thanks to the FIXTRUT 41X41 profile, the most suitable support to be created, depending on the equipment or measurements and, depending on the weight, to support with 4, 6, 8, etc., additional support depending on the load.

Kit composition: 1 adjustable support, 1 end support and 1 central support, presented in a general package of 4 kits.

Example of multiple assembly:
